MACHATHON

Overview

This document serves as a guide for Phase One of Machathon 6.0. It includes essential links for submission, data access, and evaluation criteria. The first phase is focused on handwritten text extraction and is evaluated based on Character Error Rate (CER) and Word Error Rate (WER). The phase will run for one week starting from **Feb 19**.

MACHATHON

Phase One

Evaluation Criteria

- Character Error Rate (CER): 70%
- Word Error Rate (WER): 30%
- Final Score: Based on similarity metrics

Submission Guidelines

- One submission per team per day
- Feedback will be provided within 24 hours
- Submissions must follow the template provided
- No APIs should be used for extraction

Training Data

- The training dataset consists of:
  - A folder containing image prescriptions
  - An XLSX file containing the absolute names of the images along with their corresponding prescription text

Testing Data

- The test dataset used in phase 1 will be provided for next phase with additional new data.
